

REST & HTTP – Unified Cheatsheet

Status Codes • HTTP Methods • HTTP Headers • REST Principles

1. HTTP Status Codes Cheatsheet

- 1 1xx – Informational: 100 Continue, 101 Switching Protocols
- 2 2xx – Success: 200 OK, 201 Created, 202 Accepted, 204 No Content
- 3 3xx – Redirection: 301 Moved Permanently, 302 Found, 304 Not Modified
- 4 4xx – Client Errors: 400 Bad Request, 401 Unauthorized, 403 Forbidden, 404 Not Found, 409 Conflict, 422 Unprocessable Entity, 429 Too Many Requests
- 5 5xx – Server Errors: 500 Internal Server Error, 502 Bad Gateway, 503 Service Unavailable, 504 Gateway Timeout

2. HTTP Methods Cheatsheet

- 1 GET – Retrieve data (safe, idempotent)
- 2 POST – Create resource (not idempotent)
- 3 PUT – Full update / replace (idempotent)
- 4 PATCH – Partial update
- 5 DELETE – Remove resource (idempotent)
- 6 HEAD – GET without body
- 7 OPTIONS – Allowed methods / CORS

3. HTTP Headers Cheatsheet

- 1 Authorization – Authentication token (Bearer, Basic)
- 2 Content-Type – Data format (application/json, multipart/form-data)
- 3 Accept – Accepted response formats
- 4 User-Agent – Browser / OS information
- 5 Cookie / Set-Cookie – Session handling
- 6 Cache-Control – Caching rules
- 7 ETag / If-None-Match – Cache validation
- 8 X-Forwarded-For – Client IP behind proxy
- 9 REMOTE_ADDR – Direct client IP
- 10 Access-Control-Allow-* – CORS headers

4. REST Architectural Principles (6)

- 1 Client–Server – Separation of concerns
- 2 Stateless – No server-side client state
- 3 Cacheable – Responses define cacheability
- 4 Uniform Interface – Consistent API design
- 5 Layered System – Intermediaries allowed
- 6 Code on Demand (optional) – Executable code from server

Exam tip: REST uses noun-based URLs, proper HTTP methods, meaningful status codes, and stateless communication over HTTP/HTTPS.
